- **Housing in Powder Coated Mild Steel or Stainless Steel**
- **Wood Housings with Coloured Top**
- **Laminate Infill Available**
- **Electronically Controlled**
- **UK Manufactured**
- **Full System Design Installation & Maintenance Services also Available**

Applications

Type 425 double back to back tripod turnstiles provide an attractive and convenient means of regulating pedestrian access through office foyers, leisure centres and to other areas where it is necessary to restrict unauthorised visitors, whilst maintaining a welcoming atmosphere.

Control Equipment:

Tripod turnstiles require voltage free contacts from the electronic access control equipment. All our turnstiles are compatible with a wide range of electronic recognition systems including card readers, token acceptors and remote switching from manned control points e.g reception desks. Where it is necessary to record the number of visitors, the turnstiles can be linked into a counting system, to provide local display and remote information for fire safety requirements.
